

Amendments To The Claims:

1. (Currently Amended) An emanator for evaporation of a liquid therefrom, the emanator comprising:
a first porous material; and
a second porous material that is disposed adjacent to said first porous material;
wherein said second porous material is a different material than said first porous material, and the emanator is configured such that a liquid travels through the emanator at a rate ~~no less~~ greater than a rate at which it would travel through said first porous material alone and ~~no less~~ greater than a rate at which it would travel through said second porous material alone.
2. (Canceled)
3. (Currently Amended) The emanator of claim 1, wherein said first porous material contacts said second porous material.
4. (Currently Amended) The emanator of claim 1, said first porous material comprising at least one of polyethylene, polypropylene, polyester and nylon.
5. (Currently Amended) The emanator of claim 1, said second porous material comprising at least one of polyethylene, polypropylene, polyester and nylon.
6. (Currently Amended) The emanator of claim 1, said first porous material comprising nylon and said second porous material comprising polypropylene.
7. (Canceled)
8. (Original) The emanator of claim 1, the liquid comprising liquid fragrance.
9. (Currently Amended) An air freshener comprising:
a source of a liquid fragrance; and
an emanator in fluid communication with said source of said liquid fragrance, said emanator comprising:
a first porous material through which said liquid fragrance has a first travel rate; and
a second porous material through which said liquid fragrance has a second travel rate,

said second porous material contacting said first porous material;

wherein said second porous material is a different material than said first porous material, and the emanator is configured such that said liquid fragrance has a third travel rate through the emanator, said third travel rate ~~no less~~ greater than said first travel rate and greater than said second travel rate.

10. (Canceled)

11. (Currently Amended) The air freshener of claim 9, said first porous material comprising at least one of polyethylene, polypropylene, polyester and nylon.

12. (Currently Amended) The air freshener of claim 9, said second porous material comprising of at least one of polyethylene, polypropylene, polyester and nylon.

13. (Currently Amended) The air freshener of claim 9, said first porous material comprising nylon and said second porous material comprising polypropylene.

14-22. (Canceled)

23. (Currently Amended) A refill for an air freshener, the refill comprising:
a source of a liquid fragrance; and
an emanator in contact with said source of said liquid fragrance, said emanator comprising:

a first porous material; and

a second porous material contacting said first porous material;

wherein said second porous material is a different material than said first porous material, and the emanator is configured such that said liquid fragrance travels through said emanator at a rate ~~no less~~ greater than a rate at which it would travel through said first porous material alone and ~~no less~~ than a rate at which it would travel through said second porous material alone.

24. (Canceled)
